

Eclipse Fingerprint — System Architecture v2

The load-bearing idea is the vertical line: numbers are computed left of it, language is generated right of it. They never swap jobs.

The rule this diagram enforces:

A fact is born once, in the deterministic plane, and is only ever read afterward. No agent — runtime or offline — may originate a number, a date, a distance, or a coordinate. Agents shape language around facts the engine already proved. The Claim Firewall makes that structural.

Why it scales:

Everything left of the line is cacheable and identical for every user, so 1 user and 10M users hit the same sealed results. Agent cost lives offline (build-time) or behind a cache, never once-per-request on the hot path. Scientific integrity is a property of the frozen core, not of load.
